

Victor Brito

Software Engineer | TypeScript, React, Node.js & Python

São Paulo, Brazil | victor_f_brito@outlook.com | linkedin.com/in/vbrito-dev
github.com/victorfbrito | vbrito.dev

PROFESSIONAL SUMMARY

Software Engineer with 6 years of experience building web applications, APIs and cloud-based systems. Strong background in TypeScript, React, Node.js, Python, AWS, and product engineering, with experience spanning frontend architecture, serverless services, enterprise integrations, AI-powered products, CI/CD, accessibility, and software governance. Experienced in technical leadership, mentoring developers, designing maintainable systems, and collaborating across product, frontend, backend, and infrastructure teams.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python

Frontend: React, Next.js, HTML, CSS, Tailwind CSS, Vue

Backend & APIs: Node.js, FastAPI, REST, GraphQL, AWS Lambda, Step Functions, .Net, Java

Cloud & DevOps: AWS, Azure, GCP, Docker, Git, CI/CD, Azure DevOps

Testing & Quality: Jest, Cypress, TDD, Code Review, SOLID, WCAG

Data & ORM: PostgreSQL, MongoDB, DynamoDB, TypeORM, SQLAlchemy

Engineering: System Design, API Design, Design Systems, Serverless Architecture, IAM, Observability

PROFESSIONAL EXPERIENCE

Software Engineer — NeoPTO | Sep 2025 – Present

Healthcare Platform

- Lead technical direction across TypeScript applications, defining engineering practices, reviewing architectural decisions, and mentoring 3 developers on React and frontend best practices.
- Helped design (Figma tokens) and built a reusable React + Tailwind component library with approximately 10 production components, adopted across multiple healthcare applications and reducing both implementation and design effort.
- Maintained Python AWS Lambda and Step Functions services integrating logistics providers from different hospital centers, dedicated Python backend services, and LLM-powered services.
- Created and maintained TDD-oriented Cursor rules and AI-assisted development guidelines to improve architectural consistency, development workflows, and reliability of AI-generated code.
- Drive code-review, clean-code, accessibility, and WCAG practices across frontend development.

Software Engineer — Blip | Sep 2024 – Sep 2025

Communication Platform

- Developed TypeScript/React and .Net services supporting real-time messaging and AI-powered product experiences.
- Integrated AI agents and external services into communication workflows, handling asynchronous interactions between frontend clients and distributed backend services.
- Designed and consumed APIs supporting scalable communication workflows across multiple services.
- Implemented caching strategies and eliminated redundant API requests, improving application performance and contributing to measurable improvements in user retention.
- Contributed to system-design and architecture decisions focused on scalability and clean service boundaries.

Software Development Consultant — Digital Assurance & Transparency — PwC Brasil | Jul 2023 – Sep 2024

IT Auditing and Consulting

- Built an automation pipeline for processing SAP S/4HANA-exported XLSX data, updating audit workbooks, retrieving supporting PDF evidence, and automatically organizing documentation for review.
- Performed IT General Controls (ITGC) assessments covering Access to Programs and Data, Program Changes, Program Development, and Computer Operations.
- Audited IAM controls, software-development processes, approval workflows, application logging, operational monitoring, documentation, and segregation of responsibilities.
- Advised engineering teams on Git and development workflows, including feature branches, pull requests, protected branches, controlled approvals, clean commits, and staged promotion between development, staging, and production environments.
- Supported application observability and logging practices using Grafana.
- Conducted code reviews and advised teams on SOLID principles, maintainability, CI/CD practices, software-development controls, and Azure DevOps workflows.

Software Developer — Kumulus | Oct 2020 – Sep 2022

Web Development for multiple industries

- Developed full-stack applications using React, Node.js, TypeORM, PostgreSQL, MongoDB and serverless architectures.
- Designed and consumed REST and GraphQL APIs, enabling communication across distributed application components.
- Built and tested reusable Salesforce Lightning Web Components to display role-specific customer data, integrating external services and handling loading, empty, error, and validation states.
- Worked across AWS, Azure, and GCP environments, including application deployment and CI/CD automation.
- Migrated legacy JavaScript applications to modern React architectures, improving maintainability and enabling adoption of modern frontend patterns.

Software Development Intern — Kumulus | Sep 2019 – Sep 2020

Web Development - Automations

- Contributed to JavaScript, Node.js, and React applications and testing APIs with Insomnia and Postman.
- Built Python and Selenium RPA automations and implemented interfaces from Adobe XD designs using Git-based development workflows.

SELECTED PROJECTS & COMMUNITY ENGINEERING

JumpDeck — Audio Processing Platform | 2026

React · Python · librosa · NumPy · AWS Lambda · API Gateway

- Built a web-based audio platform designed to create continuous DJ-style transitions between tracks, and 3d-spacial sounds.
- Developed a serverless Python audio-analysis pipeline with librosa and NumPy to extract information used by the playback.
- Designed the system around React, AWS Lambda, and API Gateway, separating computational audio processing from the frontend application.

Delégua — Open-Source Contributor | Ongoing

Programming Language & Developer Tools

- Contribute to an open-source Brazilian programming language designed to make programming education more accessible to Portuguese speakers and learners without strong English proficiency.
- Expanded technical and educational documentation covering topics including binary trees and unit testing.
- Contributed to the Monaco-based Delégua code editor, working on editor styling and regular-expression-based behavior.

Polímata — Engineering Contributor | Pre-release

Programming Education Platform

- Helped model application entities and domain relationships and translated product requirements into wireframes, epics, and smaller engineering tasks.
- Defined frontend/backend contracts to enable multiple contributors to develop features in parallel with clearer integration boundaries.
- Updated platform configuration and integrations for compatibility with newer versions of Delégua.
- Conducted an architectural spike comparing blockchain technologies, architecture strategies, technical trade-offs, and costs for issuing verifiable course certificates.
- Designed educational content covering algorithms including Dijkstra's algorithm, binary search, BFS, and DFS.

EDUCATION

Bachelor of Computer Engineering — Universidade São Francisco | Jan 2019 – Dec 2023

São Paulo, Brazil

- Student tutor for Object-Oriented Programming and Computer Graphics.

General English & Cultural Exchange — ATC English Schools | Nov 2016 – Jan 2017

Bray, Ireland

International English-language program focused on language immersion and interaction with students from different countries and cultural backgrounds.

CERTIFICATIONS

- Google Cloud Associate Cloud Engineer — Sep 2021
- Microsoft Azure Fundamentals (AZ-900) — Apr 2021
- Microsoft Azure Data Fundamentals (DP-900) - Feb 2022
- Microsoft Azure AI Fundamentals (AI-900) — Feb 2021
- Scrum Foundation Professional Certificate (SFPC) — Oct 2020
